

## Hyperbaric Oxygen Treatment for Chronic Osteomyelitis – Pelvis

**Initial Visit**

**Treatment 15**

**Treatment 25**

**Treatment 33**

**Treatment 41**

The patient, a 45-year-old male, was presented to HyOx with chronic osteomyelitis of the ischium. The patient received 44 hyperbaric treatments from 7/25/05 through 9/28/05 while using a Wound VAC during his stay at LTAC. End Result: After treatment, the patient went to the hospital for the formal closure of his wound. His sed rate came down as well as his CRP indicating that his osteomyelitis was under control.
