This 60-year-old female was referred to HyOx Medical Treatment Center by a hospital-based wound care center for hyperbaric oxygen therapy for a right anterior non-healing wound on her shin. After multiple rounds of antibiotics and recurrent skin grafts, the crush injury site from a motor vehicle accident had not healed for more than a year. The patient, who reported chronic pain, participated in 50 hyperbaric oxygen treatments.

**Result:** Accelerated healing and chronic pain resolution.
